**Ma contribution concerne ...**  un projet en cours  un projet en construction  une idée de projet

### Description

1) Identify and collect ongoing and scheduled projects (e.g. Generationsgaard-Beaufort, Terra-Bridel, Kraidergaard-Winseler, all schoolgardens and public garden projects, ...), new projects with local partners (communes, especially commune gardener-apprentices(!), private persons, freelancers, ... for the executing part and entrepreneurs, artisans, companies, associations > e.g, youth for climate, ...) as a executing and/or supporting part of the several local projects

2) Organise in regular intervals local workshops on the designated project with the local residents, school classes, freelancers, commune-gardener-and private gardeners, esp. the apprentices, ... (consider neighbour communes for bundling a project!) > think & act local > public workshops from beginning (flesh out, calculate, organise, execute, ... to the finish with the participants, especially including the commune gardener-apprentices for fixed workshops (on non-schooling days) which could be open for the public and supported and visited / participated by any-one > involve the participants active and directly into the project, using social media, modern communication issues, local partners, private contacts, ... > the leading part should be taken over by a local and professional gardener or by third-person > the wishes and ideas of the participants have to be included in the local projects (organise in regular times open-meetings 1-2 per month out of normal work times so that everyone could take part at important decisions or discussions related to the community-space) > can be used as competition and / or addition program for the LuGa23 .project (e.g. for visiting the different projects through Luxembourg > several workshops could be official certified (apprentices, ...) > the projects / workshops should be fashioned with attractive, inviting and interesting constructions and elements (e.g. Pavillon, Up-cycling garden oder Eco-glasshouse, Pic-Nic place, „Boule-ground“, relaxing-chill area, ...) as well designed sustainable, preferentially multifunctional constructions for a commune use and which could be built with non-qualified participants and/or freelancers (e.g. SNJ) in common with a qualified participants and mainly build up with used and/or sustainable materials (>Involve Recycling Center e.g.) > the small fixed constructions or building-like structures should be built in some few workshops led by local artisans, companies or associations / groups, ... (local support via applying publicity back) > connecting commune-gardeners, apprentices and/or skilled people to the leading part of the workshops, e.g. 1x/week, with 2-3 persons to the local project >>> missing or weak and necessary skills of the commune- gardener could be trained in the workshop by assistance of a qualified member of Horyoh a.sb.l. > certified workshops > make the workshop interesting! regularly commune activities plant-action, „plant exchange market“, garden-event, with gains via e.g. sticker(collection)action, ... > ... Aims: - Create commune and local spaces where a group of people (local residents, commune gardeners, schools, all kind of freelancers) could build together a place for common gardening (primary for own needs, own garden or public and commune spaces) - This commune garden has to offer a fixed bright range of plant-diversity (bee&butterfly), trees, bushes, shrubs, wild-flowers/shrubs/herbages, wildflower meadow ... - Meeting and being (working) together space for transmitting knowledge, skills and render the responsibility of „Nurture the Nature“ and ecological gardening (and living) but also for private action for e.g. garden or birthday-party - RE-Connect Nature - Community-building, solidarity, social cohesion, gathering, supporting, ... - depending on the amount of the participants and established staff for the workshops, a sort of plant production (bee and butterfly friendly plants) with simple technics (e.g. wood-sticks, scions, seed, ... > technics and skills all qualified gardener (should) can do!)

Note: A fix and regular staff is necessary for the regular maintenance work as e.g. watering and all kind of plant nursery, ... The local plant production in this place with a high density of plant species could and should contain vegetable and seedling, fruit trees and bushes and all kind of bee & butterfly friendly plant (herbages, wildflowers, scrubs, ...)

## De quelle manière cette mesure aide-t-elle les insectes pollinisateurs ?

- Practice and training of skills and upskilling knowledges (and the complex relation) in nature-ecological-gardening and plant nursery > „Nurture the Nature“-gardening (especially to the commune-gardeners) for an ecological maintenance of the environment
- Rise of the amount of plants and mainly of the plant diversity
- Perchance and depending on the participants and involved parties, arrange a small local production of plants for a local and own use (depending on the participants)
- The plants (trees), bushes, shrubs, herbage and flowers, including also wild species, should be replanted in public areas or on this site to complete and increase
- Via a well organized structure in case of more projects on different places, a coordinated production will rise the amount of plant species and amount
- ...

## Quel(s) acteur(s) pour la mise en place ?

- Communes - private citizens - Local artisans, companies and merchants (=local support/participants, ...) - Local associations, clubs, ... - Lycée technique Agricole and or other schools - Private garden companies - All private person > the workshops (Up-cycling / Ecobuildings / Constructions, ...) should be targeted to the youth(!)

## Je dispose déjà de ces moyens :

- A ongoing and expendable and socio-ecological project, YOUTH(ful)NATURE - SOS Kannerduerf - Mersch, which contains all principals and aims mentioned above and convenient to the „Plan Pollinisateur “ > 2 years-project with start in sept. 2019 > will be continued after this up-building project be the gardener of SOS Kannerduerf which will be trained during this 2 years > one of the aims of the project is to recover the philosophy as also the art of realisation, in case of positive evolution, on other SOS Kannerduerf Infrastructure out of Luxembourg > many ideas and creativity
- A association offering related and practical solutions to this issues. - Skills & knowledge in landscaping, plant-production, ...
- Time and ambients for taking part
- 2 potential private places (4 ha / 80 acre) > For this ongoing project YOUTH(ful)NATURE we need rather nothing else, but I propose this project: for a support on your part an/or as sample and / or as a pilot scheme to overtake, develop or a common work out
- Time and capacities to accept 1-2 to more similar projects

## Ce qui manque / ce dont j'ai besoin :

- In case of fleshing out more project(-s):
- conventions bounded by contract and/or some financial assistance, support local contacts, participants, ... and project partners, members, ... You?)
- Qualified and fix staff (commune technicians or chef-gardener could / should be involved into the local project)

## Remarques supplémentaires :

This project could be a part of a the LuGa23 and/or ecovillage economy and should, as like the YOUTH(ful)NATURE-project, be with continuance, order and with undefined length.
